

Nama : Siti Aspita Fitri
NPM : 22312046

Buat folder [id] di dalam folder admins, dan buat file page.tsx di dalamnya untuk tampilan edit data admin.

Buat tampilan formnya seperti ini, mirip seperti halaman buat data admin. Tapi di tambah value yang sudah terisi lebih dulu.

```

<
<div className="breadcrumbs text-sm mb-2">
  <ul>
    <li><Link href="/panel">Dashboard</Link></li>
    <li><Link href="/panel/admins">Admins</Link></li>
    <li>Edit admin</li>
  </ul>
</div>
<div className="flex justify-between items-center mb-3">
  <h1 className="font-semibold text-xl">Edit admin</h1>
  <div className="flex">
    <Link href="/panel/admins" className="btn btn-outline mr-2">Back</Link>
    <button type="submit" form="add-form" className="btn btn-neutral">Update</button>
  </div>
</div>
<div className="card shadow-sm">
  <div className="card-body">
    {error &&
      <div role="alert" className="alert alert-error">
        <svg xmlns="http://www.w3.org/2000/svg" className="h-6 w-6 shrink-0 stroke-current fill-none viewBox="0 0 24 24">
          <path strokeLinecap="round" strokeLinejoin="round" strokeWidth="2" d="M10 14l2-2m0 0l2-2m2 2l2-2m7-2a9 9 0 11-18 0 9 9 0 0 0 18 0z" />
        </svg>
        <span>{error}</span>
      </div>
    }
    <form onSubmit={handleUpdate} id="add-form">
      <div className="grid grid-cols-2 gap-4">
        <fieldset className="fieldset col-span-1">
          <legend className="fieldset-legend">Name</legend>
          <input type="text" value={name} onChange={(e) => setName(e.target.value)} className="input w-full" placeholder="Ex: Jhon Doe" required />
        </fieldset>
        <fieldset className="fieldset col-span-1">
          <legend className="fieldset-legend">Email</legend>
          <input type="email" value={email} onChange={(e) => setEmail(e.target.value)} className="input w-full" placeholder="Ex: jhon@acarain.com" required />
        </fieldset>
      </div>
      <fieldset className="fieldset">
        <legend className="fieldset-legend">Password</legend>
        <input type="password" value={password} onChange={(e) => setPassword(e.target.value)} className="input w-full" placeholder="*****" />
      </fieldset>
    </form>
  </div>
</div>
</>
```

Lalu buat method untuk handle submit formnya. Buat state untuk menampung sementara data dari tiap inputan. Ambil token autentikasi juga. Dan buat instance router untuk kebutuhan jika data di submit, kalau berhasil akan push router ke halaman list admin.

Buat juga method untuk fetch data admin yang akan di edit, berdasarkan id yang ada di parameter.

```
1
2  const [name, setName] = useState('')
3  const [email, setEmail] = useState('')
4  const [password, setPassword] = useState('')
5  const [error, setError] = useState('')
6
7  const token = Cookies.get('token')
8
9  const { id } = useParams()
10 const router = useRouter()
11
12 const fetchAdmin = async () => {
13   try {
14     const res = await axios.get(`/admins/${id}`, {
15       headers: {
16         Authorization: `Bearer ${token}`
17       }
18     })
19     setName(res.data.name)
20     setEmail(res.data.email)
21   } catch (err: any) {
22     console.log('Failed to fetch admin',err)
23   }
24 }
25
26 useEffect(() => {
27   if (id) fetchAdmin()
28 }, [id])
29
30 const handleUpdate = async (e: React.FormEvent) => {
31   e.preventDefault()
32
33   try {
34     await axios.put(`/admins/${id}`, {name, email, password}, {
35       headers: {
36         Authorization: `Bearer ${token}`
37       }
38     })
39     router.push('/panel/admins')
40   } catch (err: any) {
41     setError(err.response?.data?.message)
42   }
43 }
```

Kita coba tambah nama belakang user seperti di gambar ini, lalu klik update
