Buat folder create di dalam folder admins, dan buat file page.tsx di dalamnya untuk tampilan buat data admin.

Buat tampilan formnya seperti ini

```
1
2
3
4
5
6
7
8
9
10
11
12
13
14
15
16
17
18
19
20
21
22
23
24
25
26
27
28
29
30
31
32
33
34

<>
<div className="breadcrumbs text-sm mb-2">
  <ul>
    <li><Link href="/panel">Dashboard</Link></li>
    <li><Link href="/panel/admins">Admins</Link></li>
    <li>Add admin</li>
  </ul>
</div>
<div>
  <div className="flex justify-between items-center mb-3">
    <h1 className="font-semibold text-xl">Add admin</h1>
    <div className="flex">
      <Link href="/panel/admins" className="btn btn-outline mr-2">Back</Link>
      <button type="submit" form="add-form" className="btn btn-neutral">Save</button>
    </div>
  </div>
  <div className="card shadow-sm">
    <div className="card-body">
      {error &&
        <div role="alert" className="alert alert-error">
          <svg xmlns="http://www.w3.org/2000/svg" className="h-6 w-6 shrink-0 stroke-current" fill="none" viewBox="0 0 24 24">
            <path strokeLinecap="round" strokeLinejoin="round" strokeWidth="2" d="M10 14.2 2m0 0 12-2m2 2 2 2m7-2a9 9 0 11-18 0 9 0 0 118 0z" />
          </svg>
          <span>{error}</span>
        </div>
      }
      <form onSubmit={handleSubmit} id="add-form">
        <div className="grid grid-cols-2 gap-4">
          <fieldset className="fieldset col-span-1">
            <legend className="fieldset-legend">Name</legend>
            <input type="text" value={name} onChange={(e) => setName(e.target.value)} className="input w-full" placeholder="Ex: Jhon Doe" required />
          </fieldset>
          <fieldset className="fieldset col-span-1">
            <legend className="fieldset-legend">Email</legend>
            <input type="email" value={email} onChange={(e) => setEmail(e.target.value)} className="input w-full" placeholder="Ex: jhon@acarain.com" required />
          </fieldset>
          <fieldset className="fieldset">
            <legend className="fieldset-legend">Password</legend>
            <input type="password" value={password} onChange={(e) => setPassword(e.target.value)} className="input w-full" placeholder="*****" required />
          </fieldset>
        </div>
      </form>
    </div>
  </div>
</>
```

Add admin

Back

Save

Name

Ex: Jhon Doe

Email

Ex: jhon@acarain.com

Password

\*\*\*\*\*

N

Lalu buat methodode untuk handle submit formnya. Buat state untuk menampung sementara data dari tiap inputan. Ambil token autentikasi juga. Dan buat instance router untuk kebutuhan jika data di submit, kalau berhasil akan push router ke halaman list admin.

```
1
2  const [name, setName] = useState('')
3  const [email, setEmail] = useState('')
4  const [password, setPassword] = useState('')
5  const [error, setError] = useState('')
6
7  const token = Cookies.get('token')
8
9  const router = useRouter()
10
11 const handleSubmit = async (e: React.FormEvent) => {
12   e.preventDefault()
13
14   try {
15     await axios.post('/admins', {name, email, password}, {
16       headers: {
17         Authorization: `Bearer ${token}`
18       }
19     })
20     router.push('/panel/admins')
21   } catch (err: any) {
22     setError(err.response?.data?.message)
23   }
24 }
```

Kita coba input data admin baru seperti di bawah
